

Creating Windows Users and Groups

Estimated time needed: 30 minutes

In this lab you will familiarize yourself with Windows User Account creation on the Windows Server using the Server Manager.

Objectives

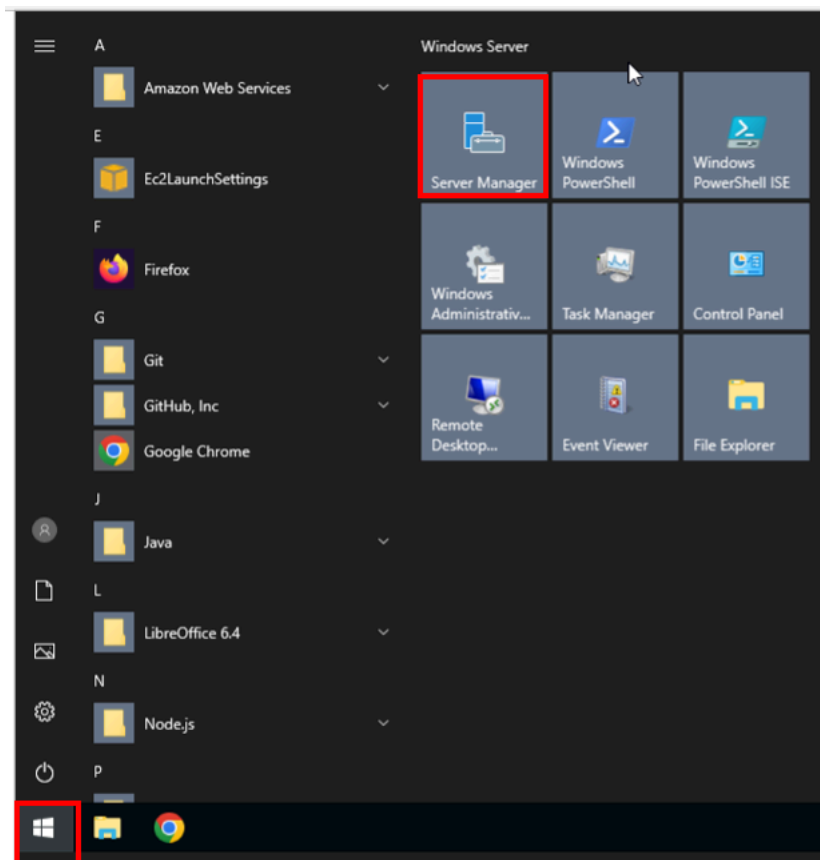

After completing this lab, you will be able to:

1. Create a new user
2. Create a group
3. Add user to the group
4. Delete the group

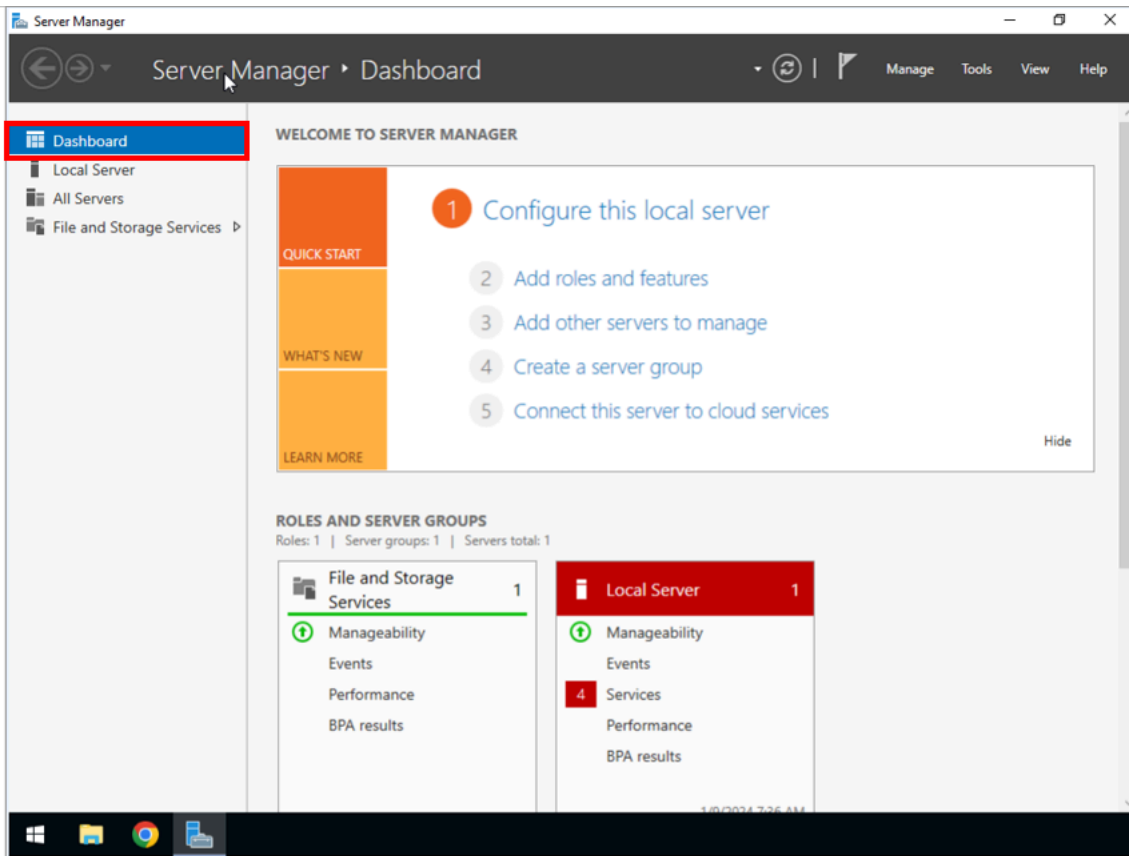

Exercise 1 : Creating a new user

In this exercise, you will learn how to use the Windows Server Manager and add a new user and assign roles to the user.

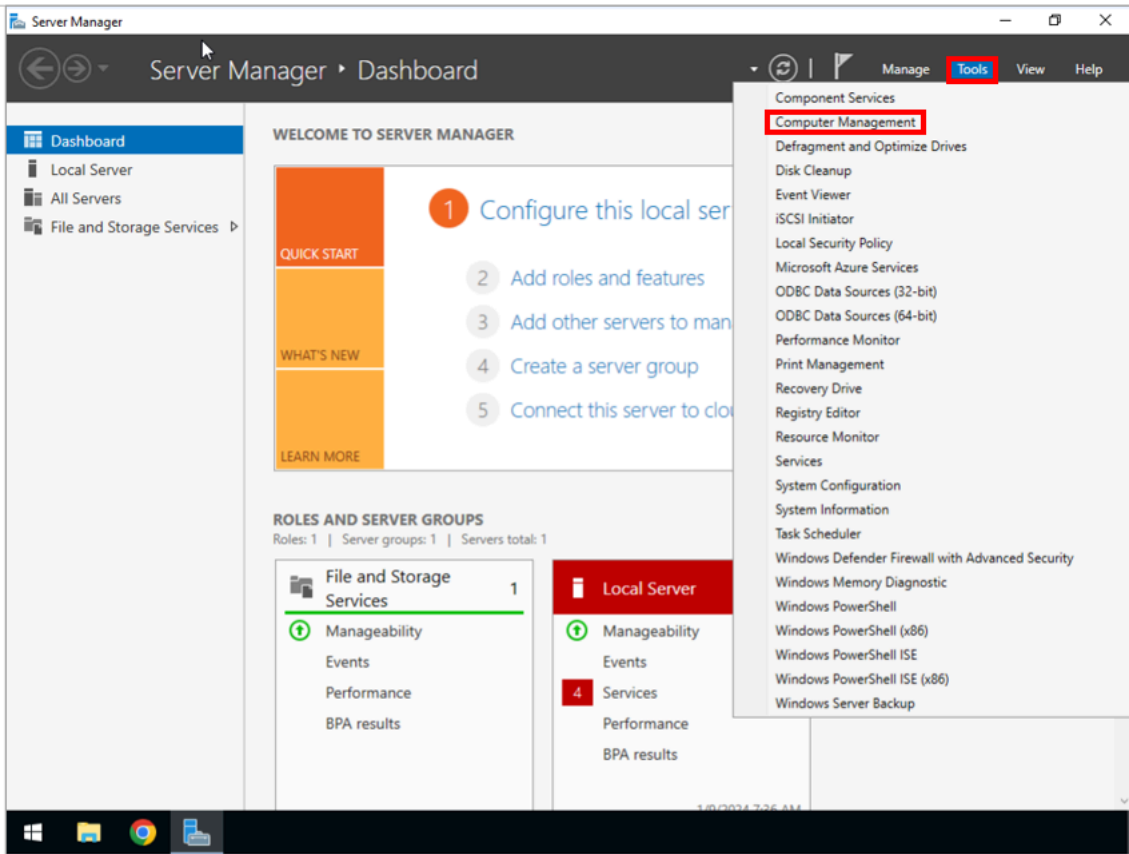

1. Click the Windows icon on the Windows virtual environment and choose Server Manager to open the **Windows Server Manager**.

2. The Server Manager Dashboard displays all details of your Windows Server.

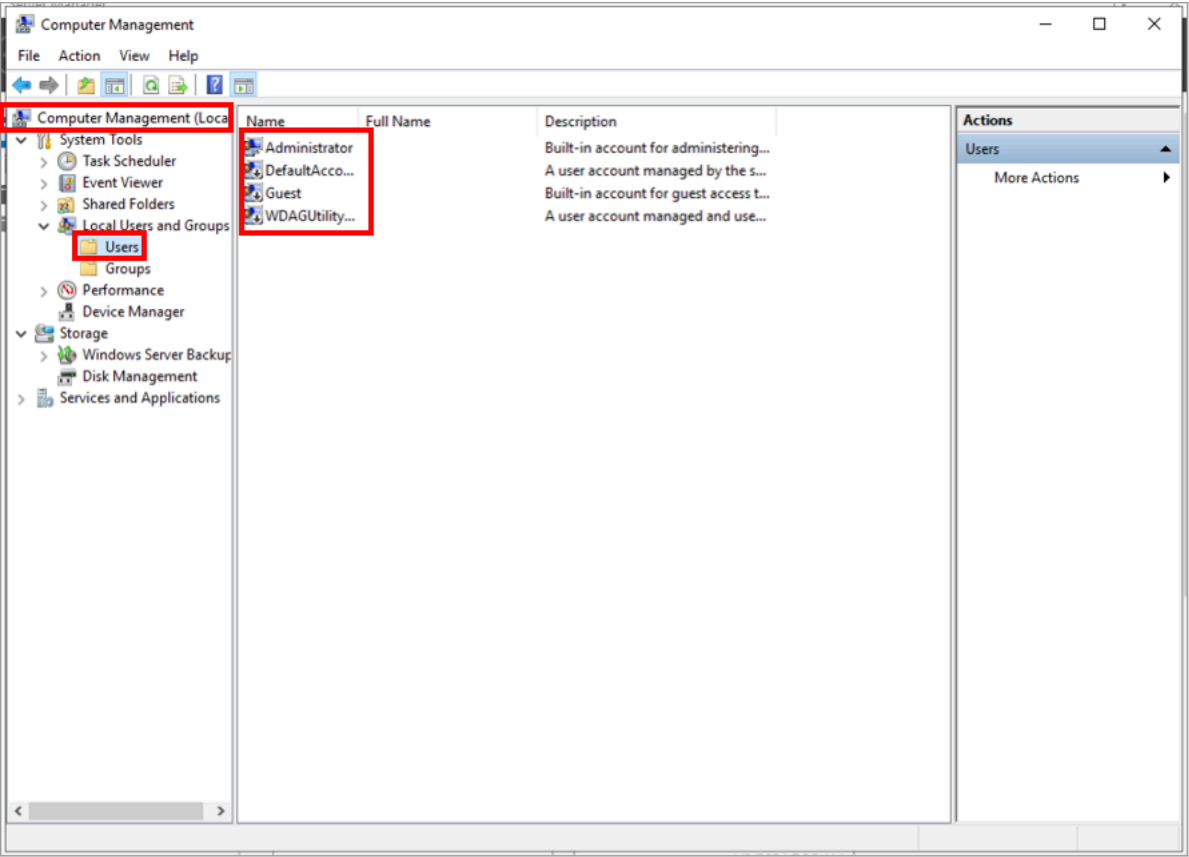

3. From the dashboard, choose the Tools menu on the top and click Computer Management.

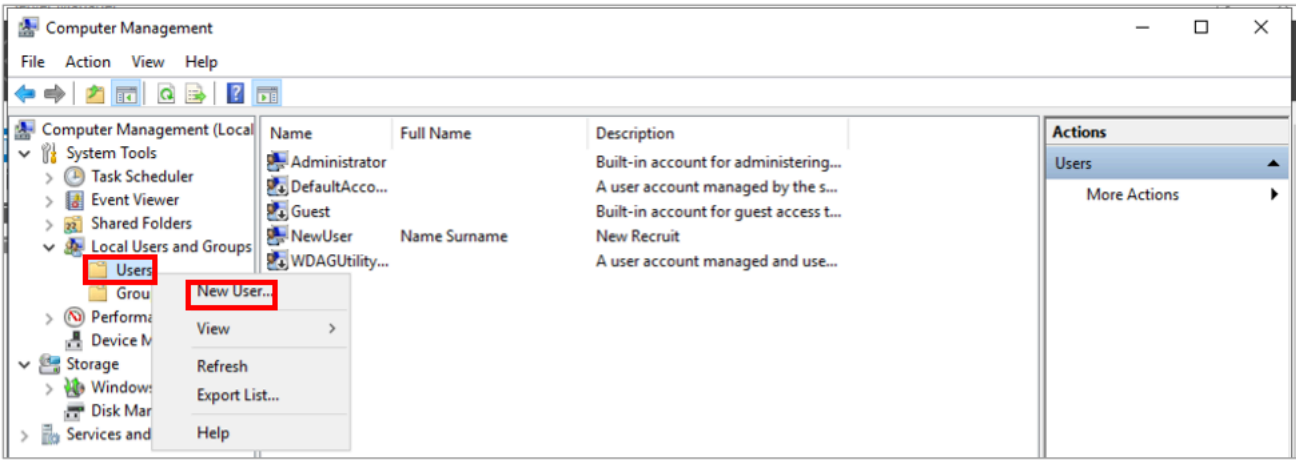

4. In the Computer Management panel, under Local Users and Groups, choose Users. This will list all the local users. In the virtual environment, you will see the following users.

- Administrator
- Default Account
- Guest

- WDAGUtilityAccount

5. Right-click Users to view the user-related context menu and choose New User.

6. Enter details for the new user. The password should be more than eight characters (Make sure it contains both uppercase and lowercase letters, Includes at least one number and one special character (e.g., !, @, #)). Click Create to create the new user, NewUser.

New User

User name:

NewUser

Full name:

Name Surname

Description:

New Recruit

Password:

Confirm password:

☒ User must change password at next logon

☐ User cannot change password

☐ Password never expires

☐ Account is disabled

Help

2. Enter details for the new group. Click Create to create the new group, Group1.

about:blank

4/8

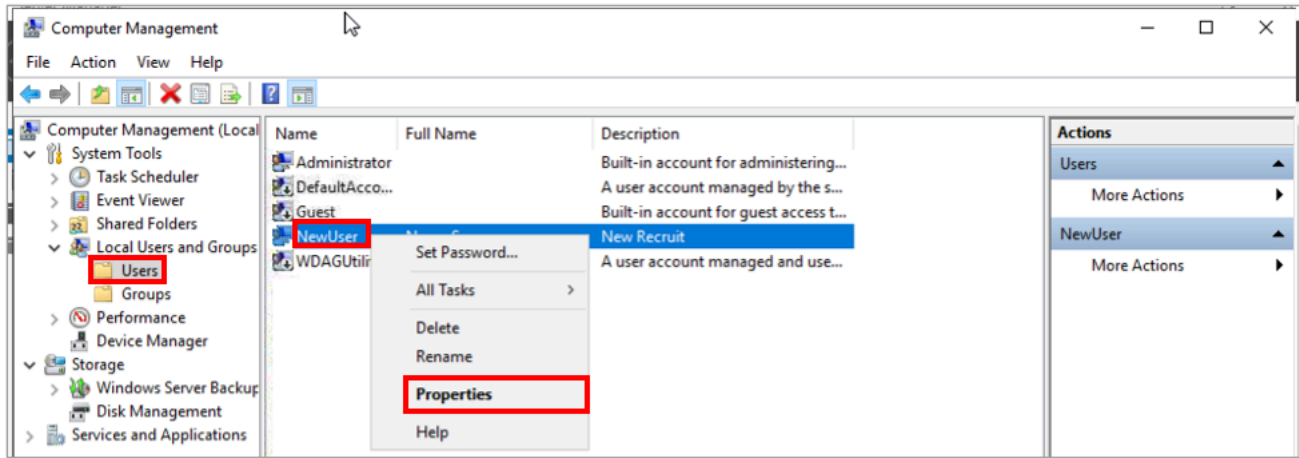

3. You will see the new group, Group1 that you just created, listed on the groups panel.

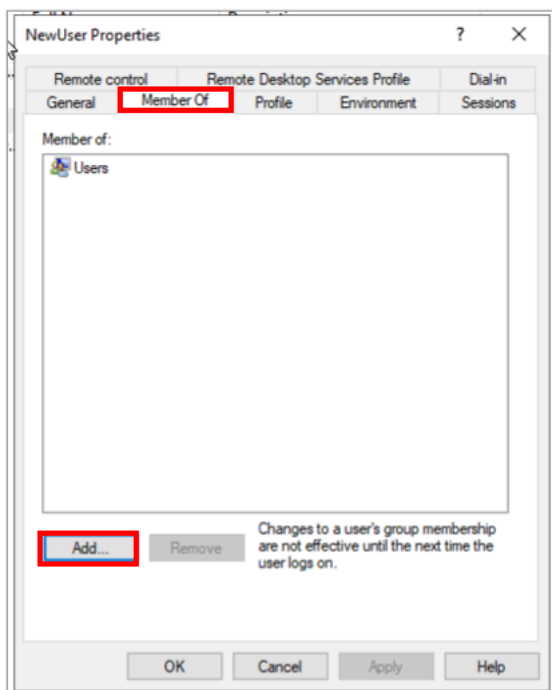

Exercise 3 : Adding user to the group

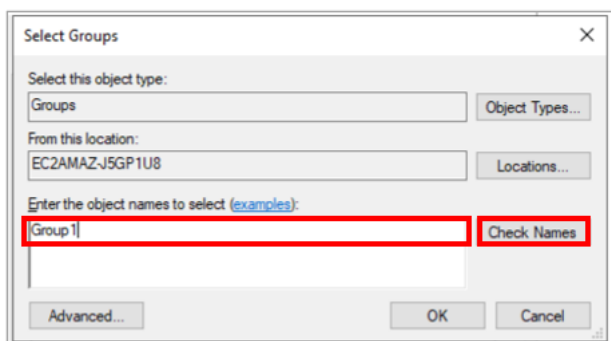

1. To add the user to groups, right-click the user and click Properties.

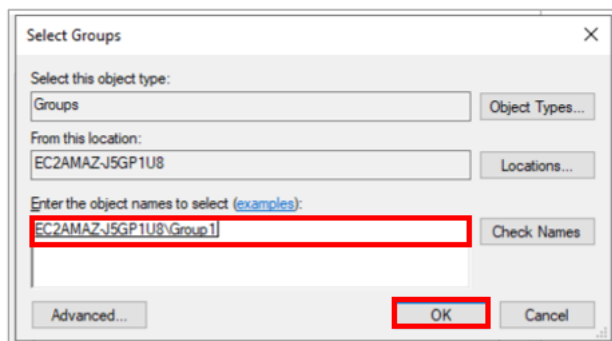

2. This will list the user properties. Choose the Member of tab and click Add.

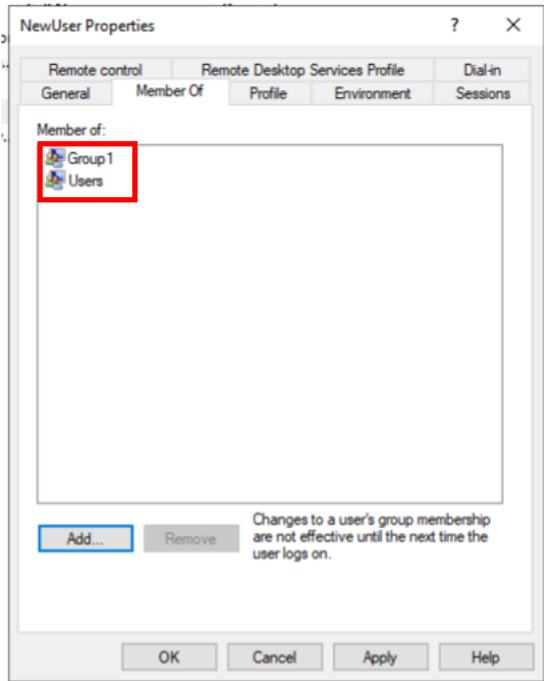

3. To add the user to the group you created in this exercise i.e., Group1, type Group1 and click Check Names. The name check retrieves the group to see if the username you entered exists.

4. Once the group is retrieved, choose the group, and select OK.

5. You will now see that the user is a member of the group, Group1.

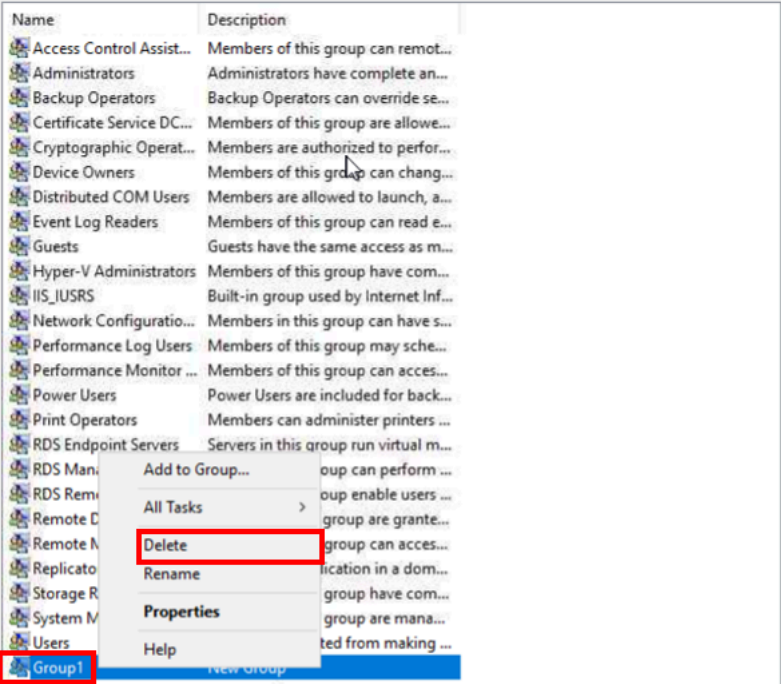

Exercise 4 : Delete the group

1. In the Computer Management panel, under Local Users and Groups, choose Groups and select your group, Group1.

2. Right-click Groups and select Delete to delete the group.

The selected group is deleted.

Congratulations! You have just completed this exercise on Windows User Account.

Please remember that the users you add will only last for this lab session because this is a virtual environment. On the actual server, these users are persisted. We highly recommend that you use a good password policy.
