

Linux User Management

Estimated time needed: 15 minutes

In this lab you will learn how to do create users, create groups and add user to groups within Kali Linux. Kali Linux is a well-known, open-source Linux operating system built on the Debian platform. It's tailored for professionals and learners in the field of cybersecurity and is purposefully crafted for tasks like penetration testing and ethical hacking.

Learning Objectives

After completing this lab:

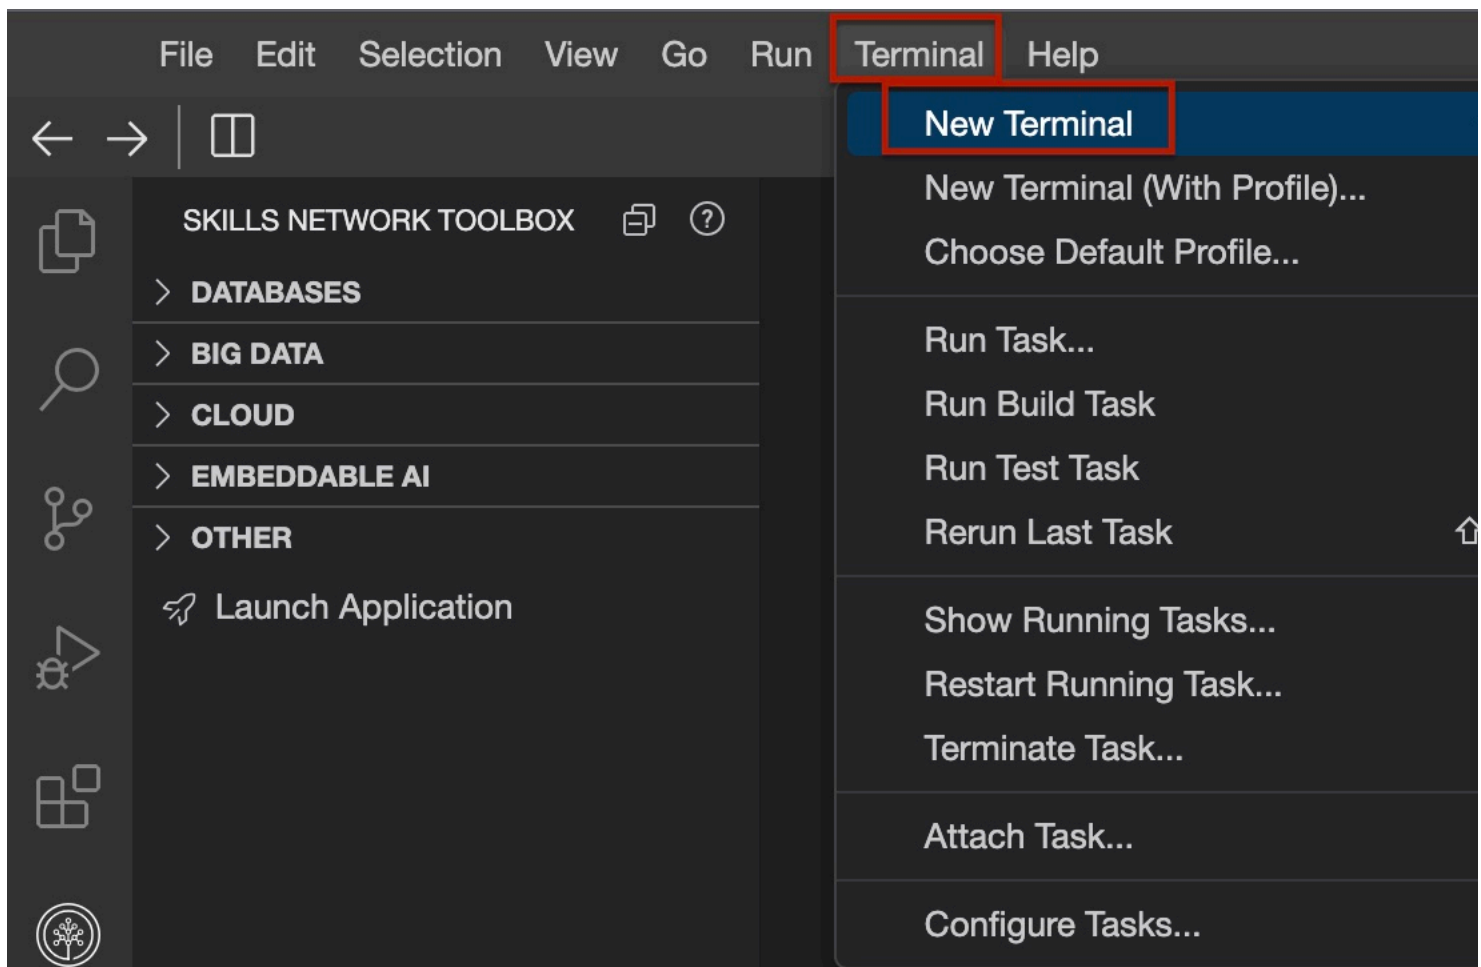

- You will be able to run a dockerized version of Kali Linux
- Create user, create a group, modify the name of a group, add the user to the group, delete the user from the group and delete the group.

Prerequisites

This lab requires docker which is preinstalled in Skills Network lab environment.

User and Groups management

1. Open a new terminal.

2. Run the following command to create user name guest. Only user with admin/root access is allowed to add user. Use the sudo prefix to run the command with admin privilege.

```
sudo useradd guest
```

2. Run the following command to create a group named analysts.

```
sudo groupadd analysts
```

3. Run the following command to verify and list the users and groups that have been added.

```
cat /etc/group
```

4. Run the following command to modify the group named analysts to developers.

```
sudo groupmod -n developers analysts
```

5. Run the following command to add the user guest to the group developers.

```
sudo usermod -a -G developers guest
```

6. Run the following command to delete the user guest from the group developers.

```
sudo gpasswd --delete guest developers
```

7. Run the following command to delete the group developers.

```
sudo groupdel developers
```

Conclusion

Congratulations! You just created a user, created a group, added the user to the group, removed the user from a group and deleted the group.
