

Lab: Protocols and Ports in Windows Defender

Skills
Network

Estimated time needed: **10** minutes

In this lab, you will open Windows Defender to see how protocols and ports are used on a local device.

Objectives

In this hands-on lab, you will:

- Determine the protocols and ports associated with various rules used in Windows Defender

Important Notices about This Lab

About Lab Sessions

Lab sessions are not persisted. This means that every time you connect to this lab, a new environment is created for you. Any data or files you saved in a previous session are no longer available. To avoid losing your data, plan to complete these tasks in a single session.

About the Lab Instructions and Solutions

In case you try to use your physical keyboard in the lab environment, it might not produce any visible results. To avoid this issue, please use the **On-Screen Keyboard** (you can find it by searching for **On-Screen Keyboard** in the search bar at the bottom of your screen). If search functionality doesn't work, you can also click on the **Windows** icon, scroll down to find **Windows Ease of Access**, click on it, and then select **On-Screen Keyboard**.

Microsoft Windows operating system features can vary based on the Windows edition. If you are completing these exercises on your machine, your navigation and solutions may differ from what's presented in this lab.

Exercise: Determine Protocols and Ports for Various Inbound Rules Used in Windows Defender

1. Select **Search**.

2. Type the word **defender** in the search bar. Then, select **Windows Defender Firewall with Advanced Security**.

3. Notice that the application that appears is the **Windows Defender Firewall with Advanced Security**.

4. In the left pane, select **Inbound Rules**. Then double-click the first **Firefox** option to view the rule properties.

5. In the **Firefox** popup, select the **Protocols and Ports** tab.
- Notice that **Protocol type** is set to **UDP**
 - UDP is faster than TCP, and is the protocol used in streaming music and videos.
 - Notice that **Local port** is set to **All Ports**
 - Click **X** to close the popup, and click **X** again to close **Windows Defender Firewall**

6. In the left pane, select **Inbound Rules**. Then double-click the second **Firefox** option to view the rule properties.

7. In the **Firefox** popup, select the **Protocols and Ports** tab.
- Notice that **Protocol type** is set to **TCP**
 - TCP is more reliable than **UDP**. HTTP and HTTPS use TCP
 - Notice that the **Local port** is set to **All Ports**
 - Click **X** to close the popup

Practice Exercise

Problem: Determine the Protocol type and Local port for SNMP Trap Service(UDP In).
