

Glossary: Getting Ready for a Cybersecurity Career

Welcome! This alphabetized glossary contains many of the terms you'll find within this course. This comprehensive glossary also includes additional industry-recognized terms not used in course videos. These terms are important for you to recognize when working in the industry, participating in user groups, and participating in other certificate programs.

Terms	Definition
AngelList	The world's largest startup community and has investment, job, and information opportunities. The site features fundraising opportunities and connects startups with Angel Investors.
Chief Information Security Officer (CISO)	A senior executive responsible for overseeing an organization's information security and cybersecurity strategy. They lead efforts to protect sensitive data, implement security measures, and ensure compliance with industry regulations, playing a key role in safeguarding digital assets and mitigating cyber threats.
Elevator pitch	A short, easily memorized statement that describes yourself, some of your key features as a job seeker, and your goals.
Incident responders	Cybersecurity professionals tasked with promptly identifying, mitigating, and recovering from security incidents. They play a critical role in minimizing the impact of cybersecurity breaches on an organization's systems and data.
Job case	A networking platform that connects job seekers with employers.
LinkedIn	A site used for professional networking and career development allows job seekers to post their resumes, skills, and experiences and employers to post jobs.
NICE Framework	A framework by NIST that categorizes cybersecurity roles and skills into seven areas with specific work roles, tasks, and required knowledge, aiding in standardized workforce development for recruiting and training cybersecurity professionals.
Online site	Sites where professionals can share information about themselves, share their experiences, and network with others.
Penetration tester	Penetration testers, often known as ethical hackers, assess and identify vulnerabilities in computer systems, networks, and applications by simulating cyberattacks. Their goal is to strengthen cybersecurity defenses by proactively uncovering and addressing potential weaknesses.
Professional portfolio	A professional presentation that shares who you are, allows you to showcase your work, and demonstrate your job skills.
Security analyst	Is a professional who monitors, analyzes, and responds to security threats, vulnerabilities, and incidents to safeguard an organization's information and assets.
Security consultant	Is a cybersecurity professional who provides expert advice and guidance on cybersecurity strategies, risk management, and solutions to organizations, assessing security postures, developing tailored recommendations, and assisting in implementing effective measures to enhance overall cybersecurity.
Security architect	Is an expert who designs and implements comprehensive cybersecurity solutions, ensuring the development of secure and resilient systems and networks within an organization. Their role involves creating strategic plans to protect digital assets and mitigate potential risks.
Security engineer	Is a professional responsible for designing, implementing, and managing security solutions to protect an organization's information systems and data. They work to ensure the integrity, availability, and confidentiality of digital assets, employing technical expertise in cybersecurity measures.
Security manager	Is a leader who oversees the overall security posture of an organization. They develop and implement security policies, manage security teams, and ensure the organization's compliance with industry regulations. Their role involves strategic planning to safeguard digital assets and mitigate security risks.
Xing	A professional networking site that is similar to LinkedIn. It offers features such as groups, news, and events.
