

Incident Response and Preparedness Resources

Estimated time needed: 5 minutes

Learning objectives

After completing this reading, you will be able to:

- List the key government sites related to cybersecurity
- Locate the different threat intelligence sites
- Find organizational sites
- Identify essential guidebooks for cybersecurity

Cybersecurity professionals use a combination of government sites, threat intelligence sites, and organizational resources to analyze and mitigate risks.

Government sites

Government sites that provide extensive resources and frameworks for cybersecurity:

- The [NIST Computer Security Resource Center \(CSRC\)](#) website offers a comprehensive range of incident response resources, including guidelines and frameworks.
- The [Cybersecurity and Infrastructure Security Agency \(CISA\)](#) website provides various tools and resources, including the National Cyber Incident Response Plan (NCIRP).
- [Ready.gov](#) is a platform that offers preparedness resources for a wide array of cyber incidents.

Threat intelligence sites

Platforms that focus on sharing real-time threat intelligence:

- The [US Department of Homeland Security](#) provides an automated indicator-sharing system and shares cyber threat indicators with private companies.
- The US Federal Bureau of Investigation (FBI), in partnership with private firms, hosts [the InfraGard Portal](#), which facilitates threat intelligence and information sharing.
- The [SANS Internet Storm Center](#) website delivers real-time threat intelligence and analysis.

Organizational sites

Organizations that provide resources to enhance cybersecurity:

- The [Incident Response Consortium](#) offers free incident response resources. This includes playbooks and templates.
- The [CISA Resources & Tools](#) platform provides a range of free resources, including technical assistance and cybersecurity assessments.
- The [NIST Cybersecurity Framework](#) offers guidelines and best practices to improve cybersecurity.

Guidebooks

Guidebooks that offer practical insights and best practices:

- The [CISA Cyber Essentials Starter Kit](#) serves as a guide for small businesses to bolster their cybersecurity posture.
- The [US DoD Cybersecurity Test and Evaluation Guidebook](#) guides planning and conducting cybersecurity tests.
- The [Cybersecurity Resource and Reference Guide](#) website offers downloadable information on cybersecurity norms, best practices, and policies.

Summary

In this reading, you learned that:

- Government sites provide key cybersecurity resources, including incident response guidelines (NIST CSRC), tools (CISA), and preparedness materials (Ready.gov).
- Threat intelligence sites focus on sharing real-time data, including threat indicators (DHS Automated Indicator Sharing), information sharing (FBI InfraGard Portal), and analysis (SANS Internet Storm Center).
- Organizational sites offer resources for cybersecurity enhancement, such as incident response tools (Incident Response Consortium), technical support (CISA Resources & Tools), and best practices (NIST Cybersecurity Framework).
- Guidebooks provide practical advice and strategies, including cybersecurity essentials for businesses (CISA Cyber Essentials Starter Kit), testing guidance (DoD Guidebook), and general best practices (Cybersecurity Resource and Reference Guide).
