

Reading: Final Project Submission Guidelines and Deliverables

Estimated Time: 2 minutes

You have completed series of labs which include understanding relational data concepts, writing simple select statements, utilizing count, distinct, and limit statements, executing insert, update, and delete statements, performing basic database operations, securing data, managing MySQL users access control, encryption and exploiting SQL injection vulnerabilities.

You'll integrate all the skills learned throughout the course in this final project on comprehensive database security and management.

How can you submit the deliverables

You can submit your project deliverables in one of the following ways:

- **Option 1: AI-Graded Submission and Evaluation**

- Complete all required tasks of the final project as instructed.
- Take screenshot of the output after completing each task.
Note: Ensure that your screenshot must display both the executed query and the resulting output.
- Submit the deliverables for **AI-based evaluation**.
- Once submitted, you will receive **automated grades instantly**.

- **Option 2: Peer-Graded Submission and Evaluation**

- Complete all required tasks of the final project as instructed.
- Take screenshot of the output after completing each task.
Note: Ensure that your screenshot must display both the executed query and the resulting output.
- Submit the deliverables for evaluation.
- In this option, you will receive your grades based on the evaluation from other peers.

*We recommend using **Option 1 for faster grading**. However, if you experience difficulties with this method or cannot access it, you may choose Option 2 instead.*

Note: You are required to choose only one submission option either AI-Graded or Peer-Graded, and not both, to receive grades for the final assignment.
